User Requirements

→ Merging all interpreted user requirements in a list

→ From a few dozens to several hundred IUR's

→ Eliminating redundant shall-statements

→ Flagging them: **M**andatory, **D**esirable, **O**ptional, **P**ossible

→ Grouping them according to the similarities of the needs they express

⚠ UR's (and IUR's) can be contradictory!

"the product shall be red"
"the product shall be blue"
